### At risk...

5 July 2004

Trafalgar Square, Nelson's Column - bacteria and lichen eating away at the stone.

British Museum - the facade is being attacked by similar bacteria and lichen. Heavy rain could cause the roof to collapse.

St Paul's - the famous dome is under threat from severe rainfall, while the exterior is ravaged by pollution.

Tower of London - flooding of the Thames would claim the Tower as one of its first victims.

Houses of Parliament - the river has narrowed by a third at Westminster since Roman times. Experts believe a flash flood could cause the banks to burst.

Buckingham Palace - the famous frontal facade could be attacked by stone-eating bugs.
